Macro-econometric Modelling and Forecasting

Course Objectives

On completion of programme participants should:

- Know the policy planning process
- Know Linkages between planning and econometrics
- Understand the stochastic process in policy implementation
- Know how to deal with stochastic variables in planning and implementation
- Use econometric package in planning and forecasting

Target Groups

- Economists
- Statisticians
- Economic policy planners
- Senior Managers in Government
- Economic policy Analysts
- Applicants should have a minimum of a degree in Economics or Statistics or equivalent with minimum modules in statistics and mathematics.

Course Outline

- General Management Principles and Skills
- Policy planning process
- Overview of forecasting and forecasting process
- Data collection and preparation
- Data mining and estimation procedures
- Planning and regression analysis
- The stochastic process and its implication on planning
- The failure of regression in planning and effect on policy
- Violation of Ordinary Least Squares Assumptions and the applicability of forecasting
- Evaluation of forecasting techniques
- Fundamentals of economic modelling
- Quantitative modelling–econometrics
- Quantitative modelling–time-series smoothing
- Practice of forecasting using regression, ARIMA and ARMA models
- The stochastic process and its implication on planning
- Implementation of forecasting
- Planning and regression analysis
- New models of planning and econometric planning

- Use of generated information in planning and its effect on policy research
- Econometric application and policy formulation and implementation
- Action Planning

Dates: 01st – 12th August 2022

Duration: 2 weeks

Course Costs: US\$3450

Venue: Pretoria, RSA
